

New option – low-profile Hook Mount for Valor® light bars

Federal Signal announces that Valor® light bars can now be ordered with the new “**Low Hook**” low-profile, hook-on mount option.

The new “**Low Hook**” option allows the body of the light bar to be approximately 7/8 of an inch lower than the standard “Hook” mount, depending on the specific vehicle make/model.

HOW TO ORDER

The screen shot shows the MOUNT options available for the Valor light bar. To configure your Valor light bar with the new low-profile hook mount, simply select the **“Low Hook”** option from the MOUNT drop-down menu within our online Lightbar configurator.

As with the other mount options, there is no additional price for selecting the new **“Low Hook”** option.

ORDERING NOTES

Note that this new option is NOT COMPATIBLE with Federal Signal’s 795H-EXT external Opticom® mounting option. When ordering a Valor with the 795H-EXT option, use the standard “Hook” mount option.

This new option is NOT COMPATIBLE with Federal Signal’s MBK03H bracket kit for attaching an MB1 LED message board to a Valor light bar. When ordering a Valor light bar with the MBK03H bracket kit, use the standard “Hook” mount option.

AVAILABILITY

Orders for Valor light bars with the new **“Low Hook”** option can be processed now.
