

ICON™ SNOW PLOW LIGHT

INTRODUCING NEW ICON SNOW PLOW LIGHT

Federal Signal's ICON™ Snow Plow Light will help you, even in the harshest weather conditions. When roads get rough and visibility is low, you want a light that can keep people safe.

Our dual-post mount helps with vibration resistance so it can stay locked in place. These lights are made to last and come with a hard coated polycarbonate lens, which adds increased scratch resistance. Built into the lights is a heated lens that will melt snow and ice off the light head's surface. With this in mind, not only will you be able to see the road clearly, but you will be seen as well.

The ICON Snow Plow Light features include low beam/high beam override, a parking light, and front and side turn signal lights. These lights come with a three-year warranty.

FEATURES

- Dual-post mount for added vibration resistance
